MODULE – 5

1) Create API for Registration & Login Page.

Ans: - API for Registration

```
$register= $this->select
("users",array("email"=>$_REQUEST['email']));
echo json_encode($register);

<script>

function check(e)
{
    $.ajax({
        type:"post",data:{"email":e.value},
        url:"the path of the api",
        success:function(response)
        {
                console.log(response);
                objectdata = JSON.parse(response)
                console.log(objectdata.code);
        }
        })
}
</script>
```

API for Login

```
$login= $this->insert("users");
echo json_encode($login);
```

2) Create Web Service for your MVC Project.
    Create API for image uploading.

   Ans: - $imageupload= $this->insert("image");

            echo json_encode($imageupload)
